DETAILED ACTION

Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the controller to automatically control and adjust the fluid flow or capacity of claim 65 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 76 and 77 are rejected under 35 U.S.C. 103(a) as being unpatentable over Stecklein in view of Kempthorne (Fig. 1). Stecklein discloses the fluid machine claimed except for the primary vane (claim 76) or the secondary vane (claim 77) being formed and connected as two halves each having a flat inner surface that abuts sealingly against the inner surface of the other half and are joined at opposite ends to define a central circular opening. Kempthorne teaches making a vane (17) of two connected halves. It would have been obvious to one having ordinary mechanical skill

Art Unit: 3748

in the art to form the primary or secondary vanes of Stecklein of two connected halves, as taught by Kempthorne, to facilitate manufacture and assembly of the vanes.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 71-75 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 105 of U.S. Patent No. 6,241,493. Although the conflicting claims are not identical, they are not patentably distinct from each other because claim 105 of the patent recites a lever to control the fixed shaft and claim 71 of the instant application recites controlling by means of a controller of the fixed shaft. When an earlier issued patent claims a species or a more specific combination, and the later application then claims the genus or broader combination, the genus or broader combination is said to be "anticipated" by the species or more specific combination. *In re Goodman*, 229 USPQ2D 2010. Anticipation is the epitome of obviousness.

Allowable Subject Matter
